

CABANACOAST

HOW TO CLEAN YOUR FIRE PIT BURNER

All **CABANACOAST®** fire pit burners are constructed of 100% stainless steel, which cannot be welded with 100% stainless steel solder. Therefore a mix of other metals is used in the solder, which can oxidize as shown in the picture below.

Oxidization does not affect the performance of the burner, and the weld will be covered by fire glass, so this will not be visible.

The oxidization can be easily cleaned with a Scotchbrite pad or similar product and clear water, as shown below.
