

HOW TO RE-COVER CUSHIONS & PILLOWS WITH REPLACEMENT CASINGS

Seat Cushions

All CABANACOAST® seat cushions are constructed from a foam core which is enclosed in a water-resistant polyester wrapper.

Remove the casing:

Lay the cushion on a clean, flat surface such as a dining table.

Carefully unzip the casing and, with the unzipped side facing towards you, gently compress the wrapped foam core inside the casing at each end of the zipper. Ease the casing back on each side a bit at a time until the wrapped foam core is released.

Set the casing aside.

Re-stuff the casing:

Lay the new casing with the zip opened and the unzipped side facing towards you.

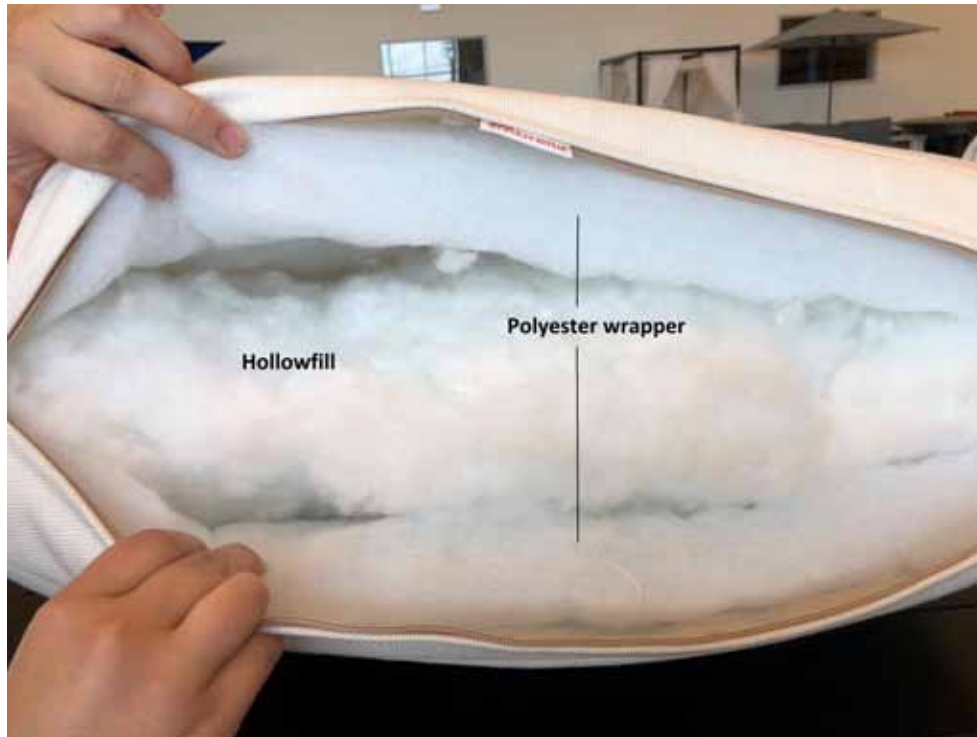

With the labelled foam end facing towards you (example, “York DP” in the picture above means York Deep Seating Chair,) gently compress the foam at each back corner and fit inside the unzipped side. While gently smoothing the polyester wrapper, ease the casing back into the casing each side a bit at a time until the wrapped foam core is fully inserted.

You may need to extend your forearm fully inside the cushion casing and smooth out any wrinkles in the polyester wrapper.

Close the zipper. Process complete.

Back Cushions

All CABANACOAST® back cushions are constructed from hollowfill which is enclosed in a water-resistant polyester wrapper.

Core bagging is available at an additional cost and must be or clearly noted on any Purchase Order at the time the order is placed.

Remove the casing as explained above for the seat cushion.

Set the back cushion

Re-stuff the casing:

Lay the wrapped hollowfill core on a clean, flat surface such as a dining table with the open end facing towards you.

Gently open the polyester wrapper like a book and remove the loose hollowfill – set the hollowfill aside.

Close the polyester wrapper like a book.

Lay the new casing with the zip opened and the unzipped side facing towards you.

Insert the closed end of the polyester wrapper (the spine of the book) into the casing and push gently to the back of the casing until the entire polyester wrapper is inside the casing.

The hollowfill may have compressed over time with usage. Take the hollowfill in handfuls and gently fluff it. Insert it evenly inside the polyester wrapper inside the casing. Insert the hollowfill as evenly as possible.

You may need to extend your forearm fully inside the cushion casing and smooth out any wrinkles in the polyester wrapper.

Close the zipper. Process complete.

Pillows

All CABANACOAST® pillows are constructed from hollowfill which is enclosed in a water-resistant polyester casing.

Unzip and remove the outer fabric casing. Place the pillow form in the new casing and close the zippered opening.

If the hollowfill inside the pillowform has become compressed, gently fluff the pillow before enclosing it in its new outer fabric casing.

Process complete.
