

Care Instructions for Mould & Mildew from Glen Raven/Sunbrella:

If dirt is allowed to accumulate in a low sun and high moisture environment, mould and mildew will grow. The food source and necessary ingredients for mould and mildew to grow are airborne and will accumulate on the fabric anytime these articles are left outdoors.

The good news is that bleach can be used on our Sunbrella fabric to kill this. If the food source is allowed to accumulate back on the fabric it will happen again, therefore regular thorough cleaning is essential in this type of environment.

Follow the cleaning instructions in the link below. Keep the fabric wet with the water/soap/bleach solution for 10 to 15 minutes before rinsing thoroughly.
