

Sectional ganging stabilizes and provides uniform separation between sectional furniture modules to maintain the streamlined look of your modular outdoor furniture configuration. We use 4 ganging connector types, which are dependent on the sectional design:

- 1) Adjustable White Nylon + Stainless Steel Sectional Clip (replaces the S, M, L size Electroplated Steel Clips for most collections)
or
- 2) Small Size Electroplated Steel Clip - Black only
or
- 3) Black Electroplated Steel Sectional Buckle - Black only
or
- 4) Fabric-Covered VELCRO Strap - Black or White

1 Sectional Connector is included at no extra cost for every 2 sectional modules purchased. Additional clips, buckles or straps are available for purchase; please refer to the Accessories section of the price list.

Adjustable Nylon + Stainless Steel Sectional Clip - White only - Model Number: 8627-N

Small Size Electroplated Steel Clip - Black only - Model Number 8627-S:

Electroplated Steel Sectional Buckle - Black only - Included with the sectional module, attached underneath the seat *Not available to order as a separate item; if additional ganging is required, order Model Number: 8627-F

Fabric-Covered VELCRO Strap - Black or White, length noted below - Model Number: 8627-F

	Tate		Adjustable White Nylon + Stainless Steel Sectional Clip
	Trellis		Adjustable White Nylon + Stainless Steel Sectional Clip
	York		Adjustable White Nylon + Stainless Steel Sectional Clip

Sectional Clips:

Sectional clips are installed on the underside of the modules and are not visible once installed.

Line up two adjoining modules and loosen the clip bolts so that the clip is open wide enough to accommodate the 2 outer undersides of the sectional modules that you are connecting.

Position the clip to straddle the two outer undersides of the sectional modules as shown in the picture below - your furniture may not look exactly as shown.

Tighten the clip bolts until the clip fits snugly around the 2 sectional frame undersides. Tighten the clip bolts enough to secure the clip to gang the sectional modules, but take care not to damage the frame by over tightening.

Note: due to different SOLWeave™ Wicker strand profiles and thicknesses, some wicker will allow a tighter fit than others.

Before ganging

INSTALLATION INSTRUCTIONS - CONTINUED

Sectional Buckles:

Sectional Buckles are installed on the underside of the modules and are not visible once installed.

Line up two adjoining modules and position the Sectional Buckle to straddle two adjacent bolts on the frame underside. Your furniture may not be exactly as shown.

Loosen the bolts. Slide the Sectional Buckle over each bolt and re-tighten the bolts to secure the Sectional Buckle to connect the 2 modules.

Fabric Covered VELCRO Straps:

Fabric Covered VELCRO Straps are installed on either the underside or the back of the module frames and may or may not be visible once installed.

Line up two adjoining modules and position the Fabric Covered VELCRO Strap to fit snugly around the 2 sectional frame undersides or backs. Your furniture may not be exactly as shown.
